

DigiSlim® Display Series

Effective format diversity from 21.5" up to 55"
Optionally double-sided

The DigiSlim® Display Series is an in-house development by PMS and offers a wide flexibility where adaption to the workspace is a must. It contains a modular framework in which various modules can be adapted. Even with less than 30mm thickness, a fanless PC, Wifi and LAN can be implemented. These displays are created for cases where standard displays do not fit.

Frame accurate content syncing via WiFi in combination with PMS PerfectShow® Digital Signage Software allows effective frame synchronized content playout without requiring any extensive cabling or video distribution.

Technical Specification:

- Single- or double sided
- Flat metal housing with a narrow frame
- Customizable housing color
- Safety glass option
- Contains an integrated fully-fledged Windows PC or a media player for content playback
- Wall-, stand- or ceiling-mountable
- Format: 21.5", 27", 32", 42", 49" or 55"
